

6

In one aspect, a mail processing system for processing a mailpiece comprises a mail processing device, an identification code reader connected to the mail processing device and configured for reading an identification code from a mailpiece processed by the mail processing device, and sorter application software for communicating between the mail processing device and an identification code server and using the identification code to access results of prior processing of the mailpiece from the identification code server to ensure the mailpiece is processed to a desired level.

In another aspect, a method for processing a mailpiece by a mail processing device comprises reading an identification code from the mailpiece, using an identification code reader, transmitting the identification code to an identification code server via sorter application software, and processing mailpiece information between the mail processing device and the identification code server via the sorter application software and using the identification code to access results of prior processing of the mailpiece from the identification code server to ensure the mailpiece is processed to a desired level.

In yet another aspect, a system for processing a mailpiece by a mail processing device comprises a reading component configured to read an identification code from the mailpiece using an identification code reader, a transmitting component configured to transmit the identification code to an identification code server via sorter application software, and a processing component configured to process mailpiece information between the mail processing device and the identification code server via the sorter application software and using the identification code to access results of prior

processing of the mailpiece from the identification code server to ensure the mailpiece is processed to a desired level.

W
In yet another aspect, a computer usable medium has computer readable code embodied therein for processing a mailpiece by a mail processing device, the computer readable code comprising a reading module configured to read an identification code from the mailpiece using an identification code reader, a transmitting module configured to transmit the identification code to an identification code server via sorter application software, and a processing module configured to process mailpiece information between the mail processing device and the identification code server via the sorter application software and using the identification code to access results of prior processing of the mailpiece from the identification code server to ensure the mailpiece is processed to a desired level.

In yet another aspect, a system of processing a mailpiece by a mail processing device comprises means for reading an identification code from the mailpiece using an identification code reader, means for transmitting the identification code to an identification code server via sorter application software, and means for processing mailpiece information between the mail processing device and the identification code server via the sorter application software and using the identification code to access results of prior processing of the mailpiece from the identification code server to ensure the mailpiece is processed to a desired level.

In yet another aspect, a mail processing system for processing a mailpiece comprises a mail processing device, an identification code reader connected to the mail processing device and configured for reading an identification code from a mailpiece
